

ABSTRACT OF THE DISCLOSURE

A hammer wrench assembly and method of use that includes a safety handle for use with a hammer wrench. The hammer wrench is fitted with a female coupling. The safety
5 handle is fitted with a male coupling adapted to mate with the female coupling. The male coupling is pivotally coupled to the safety handle so that the handle can be rotated up to 180°. The hammer wrench assembly can be used by one user or two users. With two users, one user can swing the hammer
10 while the other use can steady the hammer wrench with the safety handle.
